Comments

The passenger compartment of the Q2 remained stable in the offset deformable barrier test. Dummy readings indicated good protection of the knees and femurs of both the driver and passenger dummies. Audi showed that a similar level of protection would be provided to occupants of different sizes and to those sat in different positions. Protection of the passenger dummy was good for all critical body areas. In both the side barrier test and the more severe side pole impact, maximum points were scored, with good protection of all critical parts of the body. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision and a geometric assessment of the rear seats indicated good whiplash protection there, too. The Q2 has an autonomous emergency braking system that operates at the low speeds, typical of city of driving, at which many whiplash injuries are caused. The system performed well in Euro NCAP's tests, with a collision against a stationary car being avoided at all test speeds.

Comments

In the frontal offset test, protection of the 6 year and 10 year dummies was good or adequate for all critical body areas. In the side impact test, protection was good and maximum points were scored. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag and the system was rewarded. All of the restraint types for which the Q2 is designed could be properly installed and accommodated in the car.

System Name	Audi pre-sense front	
Type	Auto-Brake with Forward Collision Warning	
Operational From	10 Km/h	
Additional Information	Defaults on for every journey; operates above 40km/h and in low ambient light	

PERFORMANCE ■	Autobrake Function	
	Avoidance	Mitigation
Running Adult crossing from Farside	Collision avoided up to 50 km/h	Impact mitigated up to 60 km/h
Walking Adult crossing from Nearside -25%	Collision avoided up to 40 km/h	Impact mitigated up to 60 km/h
Walking Adult crossing from Nearside -75%	Collision avoided up to 35 km/h	Impact mitigated up to 60 km/h
Running Child from behind parked vehicles	Collision avoided up to 35 km/h	Impact mitigated up to 50 km/h

Comments

The bonnet provided predominantly good or adequate protection to a pedestrian's head. The bumper scored maximum points in Euro NCAP's tests, with good protection at all test locations. However, the protection provided to the pelvis was more mixed, and ranged from good to poor. The autonomous emergency braking system can detect pedestrians and performed well in Euro NCAP's tests, collision with the target being avoided or mitigated in many of the test scenarios.

Comments

The Q2 has a seatbelt reminder system for the front and rear seats. Its standard-fit autonomous emergency braking system showed good performance in tests of its functionality at highway speeds, with complete avoidance of the target in almost all of the test scenarios. The Q2 also has a lane assistance system that warns the driver when the car is drifting towards a lane marking and gently steers the car back to its path.
