RATING	SCORE
 ADULT OCCUPANT ★★☆☆☆	19 Front: 8 Side: 11
 CHILD OCCUPANT ★★☆☆☆	31
 PEDESTRIAN ★☆☆☆☆	5

Adult occupant protection

Child restraints

- 18 month old Child Britax Roemer Baby-safe Plus, rearward facing
- 3 year old Child Britax Roemer Duo Plus, forward facing

Pedestrian protection

No image car front available

Safety equipment

- Front seatbelt pretensioners
- Front seatbelt load limiters
- Driver frontal airbag
- Front passenger frontal airbag
- Side body airbags
- Side head airbags
- Driver knee airbag
- ISOfix front
- ISOfix rear

Car details

- Hand of drive: LHD
- Tested model: Dacia Logan 1.4
- Body type: small family car
- Year of publication: 2005
- Kerb weight: 1040
- VIN from which rating applies: UU1LSDAAH34005417

Comments

The Logan's body proved to be strong and the car achieved a three star rating for adult protection. The front passenger dummy's chest instrumentation recorded high loads in the frontal impact. High loads were

also recorded by the driver's chest instrumentation in the side impact. The child protection offered was fair. But protection for pedestrians and other vulnerable road users was poor.

Front impact

The stable passenger cell and the single stage non-tethered airbags for the driver and front passenger worked well together but loads recorded by the dummies' chests, particularly the passenger's, were on the high side. While the footwell suffered only minimal distortion, poor control of the displacement of the clutch and brake pedal compromised protection for the driver's feet. The brake pedal was also found to be blocked after the test, putting the driver's lower legs at further risk. He also risked knee injuries from the steering column and its mounting bracket.

Side impact

The driver dummy's chest instrumentation recorded high loads but his abdomen and pelvic region were protected. However, marks were taken away because forces transferred unrealistically up the driver's dummy's spine so reducing the impact forces recorded at its chest.

Child occupant

The vehicle has a manual switch for the passenger airbag. Its status cannot be changed while the ignition is on and, if this is attempted, a warning light appears. The recommended restraints were a Britax Romer Duo Plus fitted forward facing and a BabySafe Plus fitted rear facing. Both installed using the adult belts. They provided mixed protection. Both children were well protected in the side impact but in the frontal test, the dummies' instrumentation recorded high neck loads on the younger child and high chest loads on the 3 year old.

Pedestrian

The bonnet gave some cushioning where an adult's head would most likely strike and limited protection where a child's head might strike. But the Logan's wings, bonnet leading edge and bumper offered no protection at all.
